Add API Support for Filtering Unscheduled DAGs #53741

 Closed

 Parent: [Filters] Add filtering support to Search - Dags

 #72029

AryanK1511 opened on Jul 24, 2025

Contributor

Description

Add the ability to filter DAGs based on their scheduling status, specifically to identify unscheduled DAGs (those with `schedule_interval=None`).

Proposed Solution

Add a new query parameter `is_scheduled` to filter DAGs based on their scheduling status.

Use case/motivation

Currently, there is no way to filter DAGs based on whether they are scheduled or not. This makes it difficult to identify and manage DAGs that are meant to be triggered manually or through external systems. Once this is implemented, the UI filter functionality will be built on top of this.

Are you willing to submit a PR?

- ☒ Yes I am willing to submit a PR!

Code of Conduct

- ☒ I agree to follow this project's [Code of Conduct](#)

Create sub-issue

The Workflow

1. Discovery Dag identifies suitable issues, scored and ranked according to a prompt
2. I select the issue I want the agent to work on
3. Asset aware scheduling passes the issue and associated context to the Execution Dag
4. The Execution Dag then...
 - a. Writes tests via **AgentOperator**
 - b. Critiques those tests up to 5 times (I cheated here, but only slightly)
 - c. Once the tests are judged to be suitable, it will write the code to satisfy the tests up to 5 times
 - d. If all tests pass (including **prek/pre-commit**, OpenAPI specs, etc)
 - e. Ships a PR
5. The PR gets one-shot and merged!

How does it do all this?

Rigorous TDD

A little bit of grease

RNHTTR [yesterday](#)

Author

I don't feel strongly either way. Selfishly and candidly, I'd prefer this to be merged and then adjusted later since this PR is mostly for my Summit talk about using Airflow as a sort of guardrail for automated agentic coding, and it one-shot this.

I think it'd be a backward compatible change, and I'd be happy to commit to changing that in a follow-up PR. That's not a good reason to avoid this if you feel it's important, though.

My Workflow

- Strict [Claude.md](#)
- Strict TDD rules
 1. First step: Always build tests first, and make sure they fail!
 - i. We don't want the agent writing fluff tests
 2. Write code
 3. Run unit tests and verify they pass
 4. Run Dags
- Write a prompt
- Play a game of chess (or do something useful)

Single-Pan Lemon Chicken, Potatoes, and Green Beans

40 minutes · serves 3

Ingredients

- 1 pound boneless, skinless chicken breasts, cut into 1-inch pieces
- 1 pound baby potatoes, quartered
- 8 ounces green beans, trimmed
- 2 tablespoons olive oil, divided
- 1 teaspoon garlic powder
- 1 teaspoon Italian seasoning
- 3/4 teaspoon salt
- 1/4 teaspoon black pepper
- 2 tablespoons lemon juice

Steps

- Heat 1 tablespoon olive oil in a large skillet over medium-high heat.

Single-Pan Beef Taco Rice

30 minutes · serves 3

Ingredients

- 3/4 pound lean ground beef
- 1/2 cup diced yellow onion
- 1 tablespoon taco seasoning
- 3/4 cup long-grain white rice
- 1 1/2 cups low-sodium beef broth
- 1 cup canned diced tomatoes with juices
- 1/2 cup frozen corn
- 3/4 cup shredded cheddar cheese

Steps

- Heat a large skillet over medium-high heat.
- Cook the ground beef for 5 minutes.
- Add the onion to the skillet.

Dump-and-Bake Salsa Chicken and Rice

50 minutes · serves 3

Ingredients

- 3/4 cup long-grain white rice
- 1 1/2 cups low-sodium chicken broth
- 1 cup mild salsa
- 1/2 cup frozen corn
- 1/2 teaspoon ground cumin
- 3 boneless, skinless chicken thighs, about 5 ounces each
- 1/4 teaspoon salt
- 3/4 cup shredded Monterey Jack cheese

Steps

- Heat the oven to 400°F.
- Coat an 8-inch square baking dish
